Advantage of technology in teaching and education

Dr. Ishwar Singh Malik and Dr. Meenu

Abstract

Nowadays, particularly, the position of educational technology in teaching and education has been immense significantly since of the employ in sequence and communiqué technologies. With the help of diverse applications for detachment education, the Internet, teachers, and students themselves, they see the benefit of technology. The query is whether schools and teachers, they are ready for the utilize of technology in education and teaching and whether they are conscious of its reimbursement? In this paper, we try to give an impression of the significance and use of educational technology in the teaching and education.

Keywords: Technology, teaching, education, students and benefits

Introduction

Use of technology in teaching and education is a methodical and prearranged procedure of applying contemporary expertise to get better the superiority of education (competence, most advantageous, factual, etc.). It is a methodical way of conceptualizing the execution and assessment of the educational process, i. e. knowledge and instruction and help with the request of modern educational teaching techniques. It includes instructional resources, methods and association of work and relationships.

The contemporary classroom has numerous ladders frontward in its development of the knowledge surroundings in the past 30 years. A lot of the reimbursements that we have seen in this setting are due to the foreword of new expertise options for students. As an alternative of having a single processor for a class to use or a laboratory surroundings for the whole school positioned in one room, we can now help students learn at their table or desk with items issued to them directly.

Our expansion of the Internet since 1985 has helped us to comprise more technical right of entry to information in the contemporary classroom as healthy. At the present students obtain to play interactive knowledge games, vie next to other students, and have their instructive figures tracked in real-time data to know where their tip of focus should be.

Introducing technology to students in a classroom setting can surely help the educational surroundings, but it also requires equivalent access for all students to ensure that everyone receives the same opportunities for success. That is why each school district, teacher, and parent should every so often appraise the advantages of technology in teaching and education.

Technology has three domains of use

- Technology as a tutor (computer gives instructions and guides the user),
- Technology as a teaching tool and
- Technology as a learning tool.

Advantages of technology in Teaching

Since computers are still not extensively used in many schools, the teaching process is dominated by customary methods. It is conquered by the anterior form of work where the teacher had adequate communication with students. Breakdown to flourish at their own pace and inadequate activity of students was one of the drawbacks of this type of learning. In class, we have children who are not consistently in acquaintance and never pay enough attention to those who are not sufficiently mastered the substance and those who are above their meddling. Some other advantages are under below:

- Technology helps children to stay aggravated throughout the knowledge procedure.
- It encourages more communiqué between teachers and parents.
- Technology options in the classroom are very reasonably priced.

- It creates new traditions to learn for today's student.
- Technology allows us to give students' right of entry to data from a single location.
- It gives us better contact to behavioral data on students.
- Technology helps to get ready students for their future world.
- The opening of technology allows for the teaching of wanted occupational skills.
- Technology in the classroom encourages teamwork.
- It encourages students to hang about occupied with their knowledge surroundings.
- Teachers have more trustworthiness when they use technology in the classroom.

Conclusion

The attendance of technology is rising in the classroom. The new generation of kids comes prepared to work with these new technologies, which play a significant role in children's knowledge and acquiring various cognitive information so that educational technology must be included into future curricula. The application of educational technology enhances skills and cognitive individuality. With the help of new technology comes an explosion of learning and getting new information, particularly on mobile plans.
